

Pen-apple Python - *Functions*

A Teknowledge Activity

```
1 def verse(thing1, thing2):
2     print("I have a", thing1)
3     print("I have an", thing2)
4     return "I have an " + thing2 + "-" + thing1
5
6 verse1 = verse("pen", "apple")
7 print(verse1)
```

*You should be going through this with a mentor! Draw arrows from the **function call** to the **function**.*

1) Go through this with a mentor and write what it will print below!

2) What is being **returned** from the function `verse(...)`?

3) What does `thing1` equal? What does `thing2` equal?

4) Now go to tinyurl.com/applePenn1 to see if you got it right!
